

YUNEX TRAFFIC: VISUAL STORYTELLING

Photography and illustration are powerful, engaging elements that add real value when used appropriately and consistently alongside content.

Please follow these guidelines on the best ways to select and present your imagery.

VISUAL STORYTELLING

Our visuals focus mainly around cities, and the people who live in them, at the edge between today and tomorrow. They reflect our vision to transform the spaces we live, work, and move in. For a better quality of life, less accidents and healthier air.

VISUAL STORYTELLING: TYPES OF VISUAL ASSETS

We distinguish between 4 different types of visual assets:

01. Brand Imagery

Purpose: Documentary style.
Tell stories from the real world.

02. Data Visuals

Purpose: See the world through data. Reminiscent of dashboards, these visuals elegantly connect products and surroundings.

03. 3D Renderings

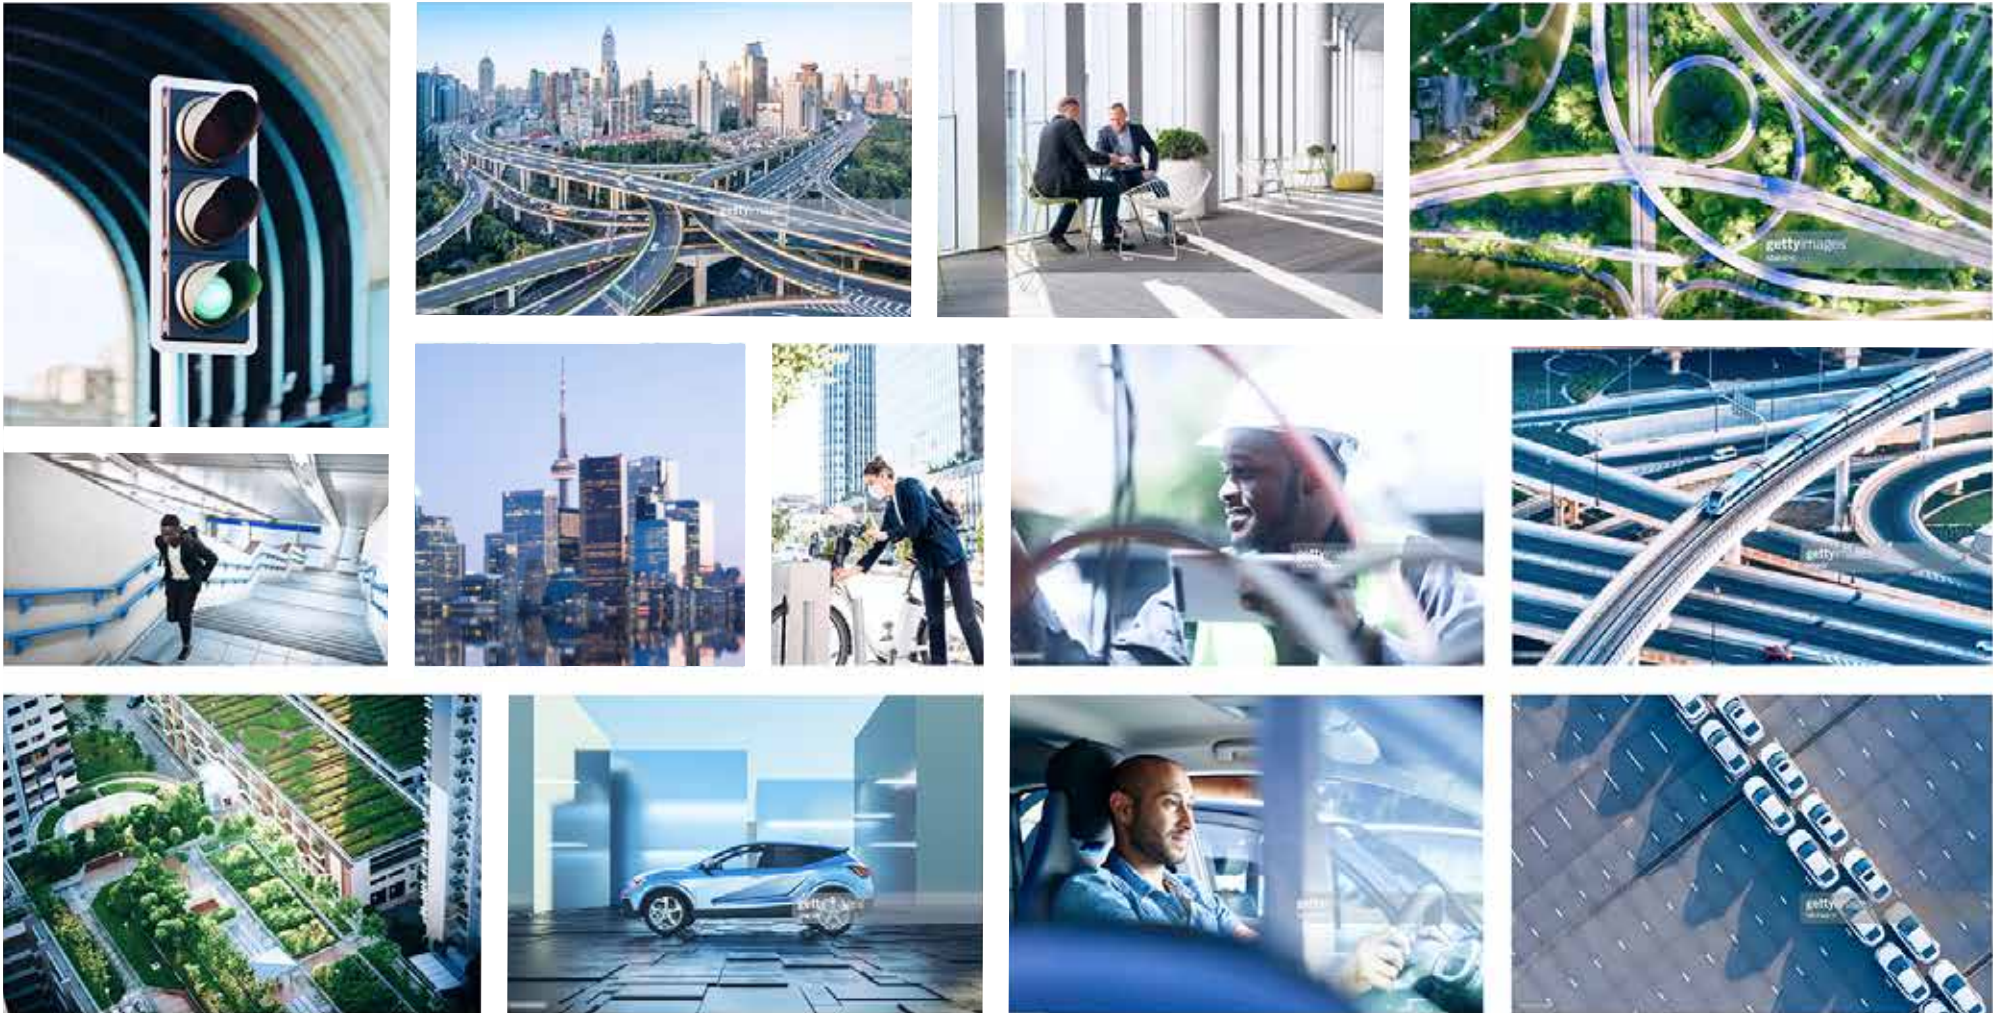

Purpose: Stories of transformation. Stylistic elements beyond the limitations of "real life" footage.

04. Illustration & Icons

Purpose: Tell stories that a photo can't tell.

VISUAL STORYTELLING: BRAND IMAGERY

VISUAL STORYTELLING: BRAND IMAGERY (MOTIF SPECTRUM)

Yunex Traffic uses different levels of detail, ranging from far away to close up. All images should be characterised as clear, positive, forward thinking, authentic and confident.

Motif "Above the city"

Motif "In the city"

Motif "Detail"

VISUAL STORYTELLING: BRAND IMAGERY (COLOR CORRECTION)

To achieve a memorable visual language, we use color correction that makes our imagery even more distinctive and strengthens our brand essence.

All images thus fit seamlessly into the Yunex Traffic color spectrum and acquire their very special look and feel. We play with the integration of the silver gradient, different shades of blue, and green as our highlight color.

VISUAL STORYTELLING: BRAND IMAGERY (DOS AND DON'TS)

✓ Prefer bright and friendly images

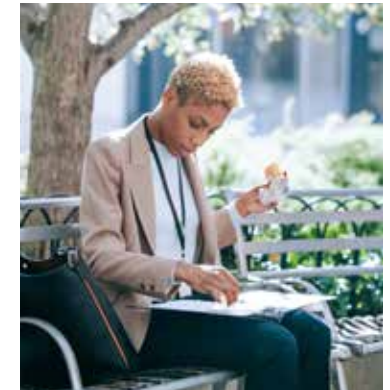

✓ All objects should be sharp / in focus.*
*Exceptions can be portraits or close ups

✓ Use images that have a clear focus point, ideally geometry

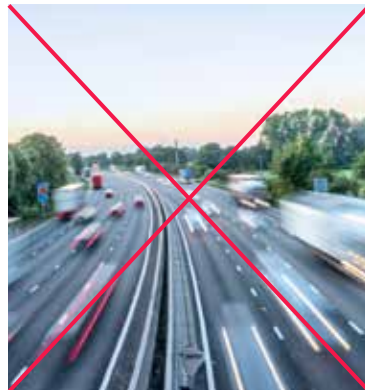

✓ Include life in all street pictures
(traffic, people, etc)

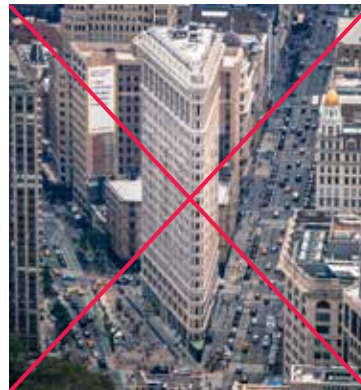

✓ Select natural and authentic scenes

✗ Try to avoid nighttime photography

✗ Don't use (motion) blurred images
*Exceptions can be made if only small parts of the image are blurred, that are not the main motif

✗ Avoid images that are overly busy

✗ Try to avoid showing empty streets

✗ Avoid very "stocky" or "posy" images

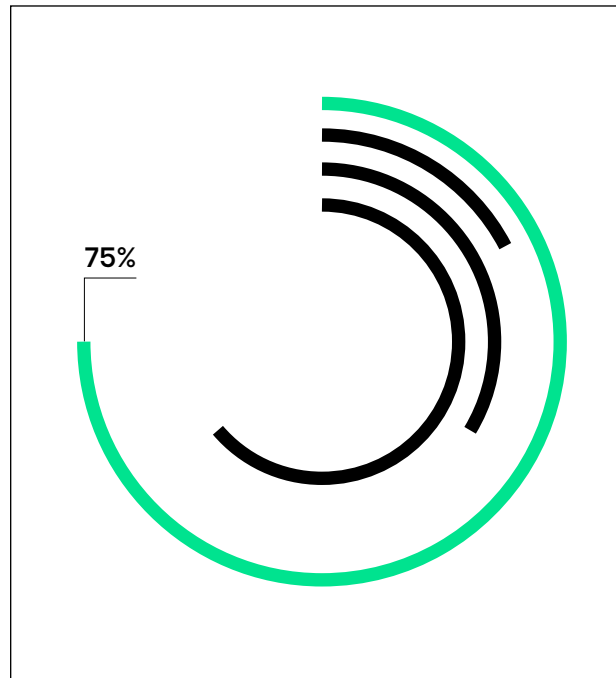

VISUAL STORYTELLING: DATA VISUALS

Yunex Traffic allows you to see the world through data. Reminiscent of dashboards, these visuals elegantly connect products and surroundings.

Brand images, preferably with strong geometric traits

Clean, simple, infographic-inspired vector elements

Both elements combined, to create a strong and meaningful image

VISUAL STORYTELLING: DATA VISUALS (EXAMPLES)

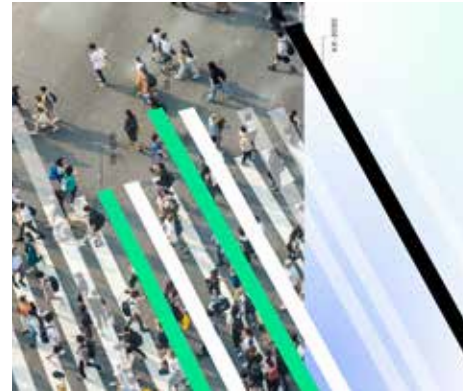

VISUAL STORYTELLING: DATA VISUALS (DOS AND DON'TS)

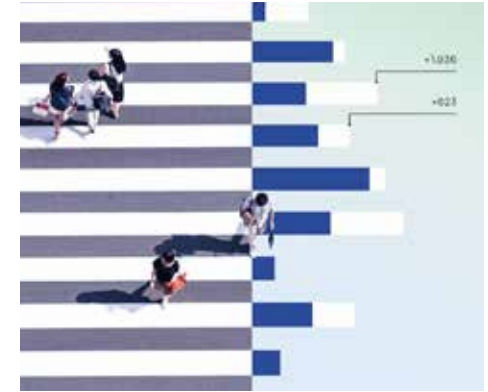

✓ Use black and / or white plus one highlight color (blue or green)

✓ Add simple typography or icons (optional)

✓ If necessary, adapt to the perspective, but stay flat (optional)

✓ Combine with gradient (optional)

✗ **DON'T** use too much color

✗ **DON'T** try to turn it into a complex infographic

✗ **DON'T** use effects that are not branded

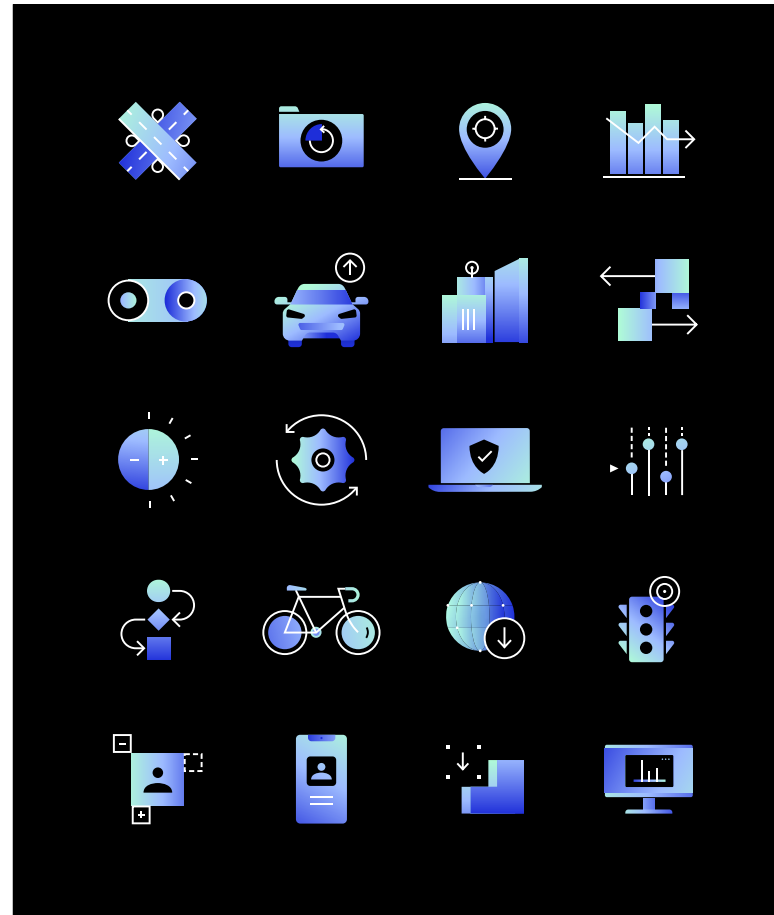

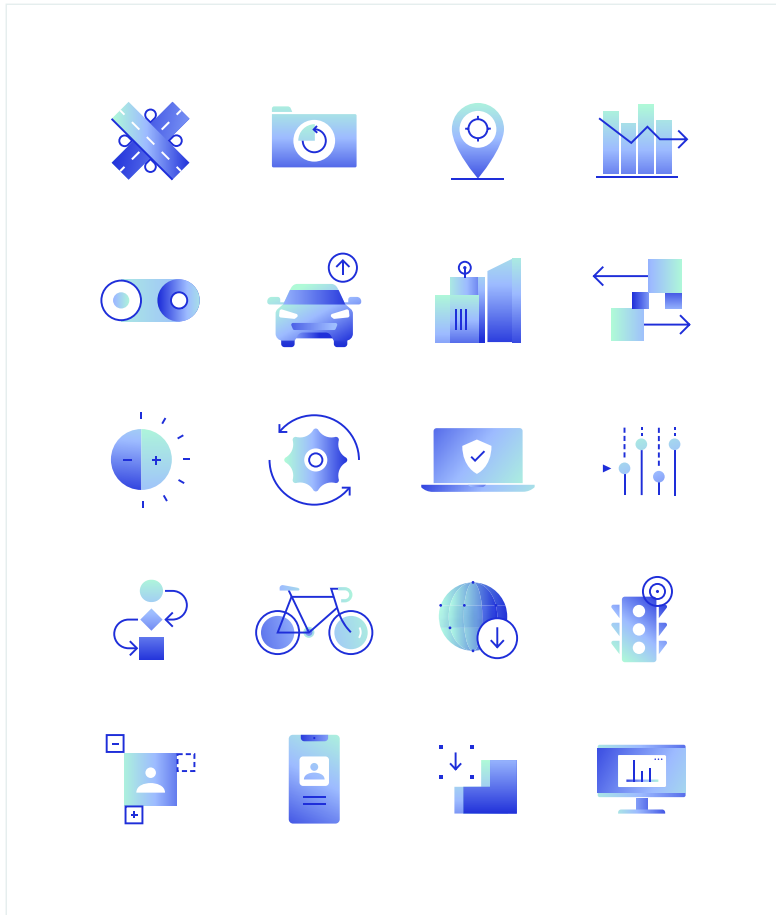

✗ If a topic or image doesn't work, don't force it. Use a regular brand image instead

VISUAL STORYTELLING: ICONOGRAPHY

For small use and as part of our data visuals we use simple black and white line icons.

VISUAL STORYTELLING: MINI ILLUSTRATIONS

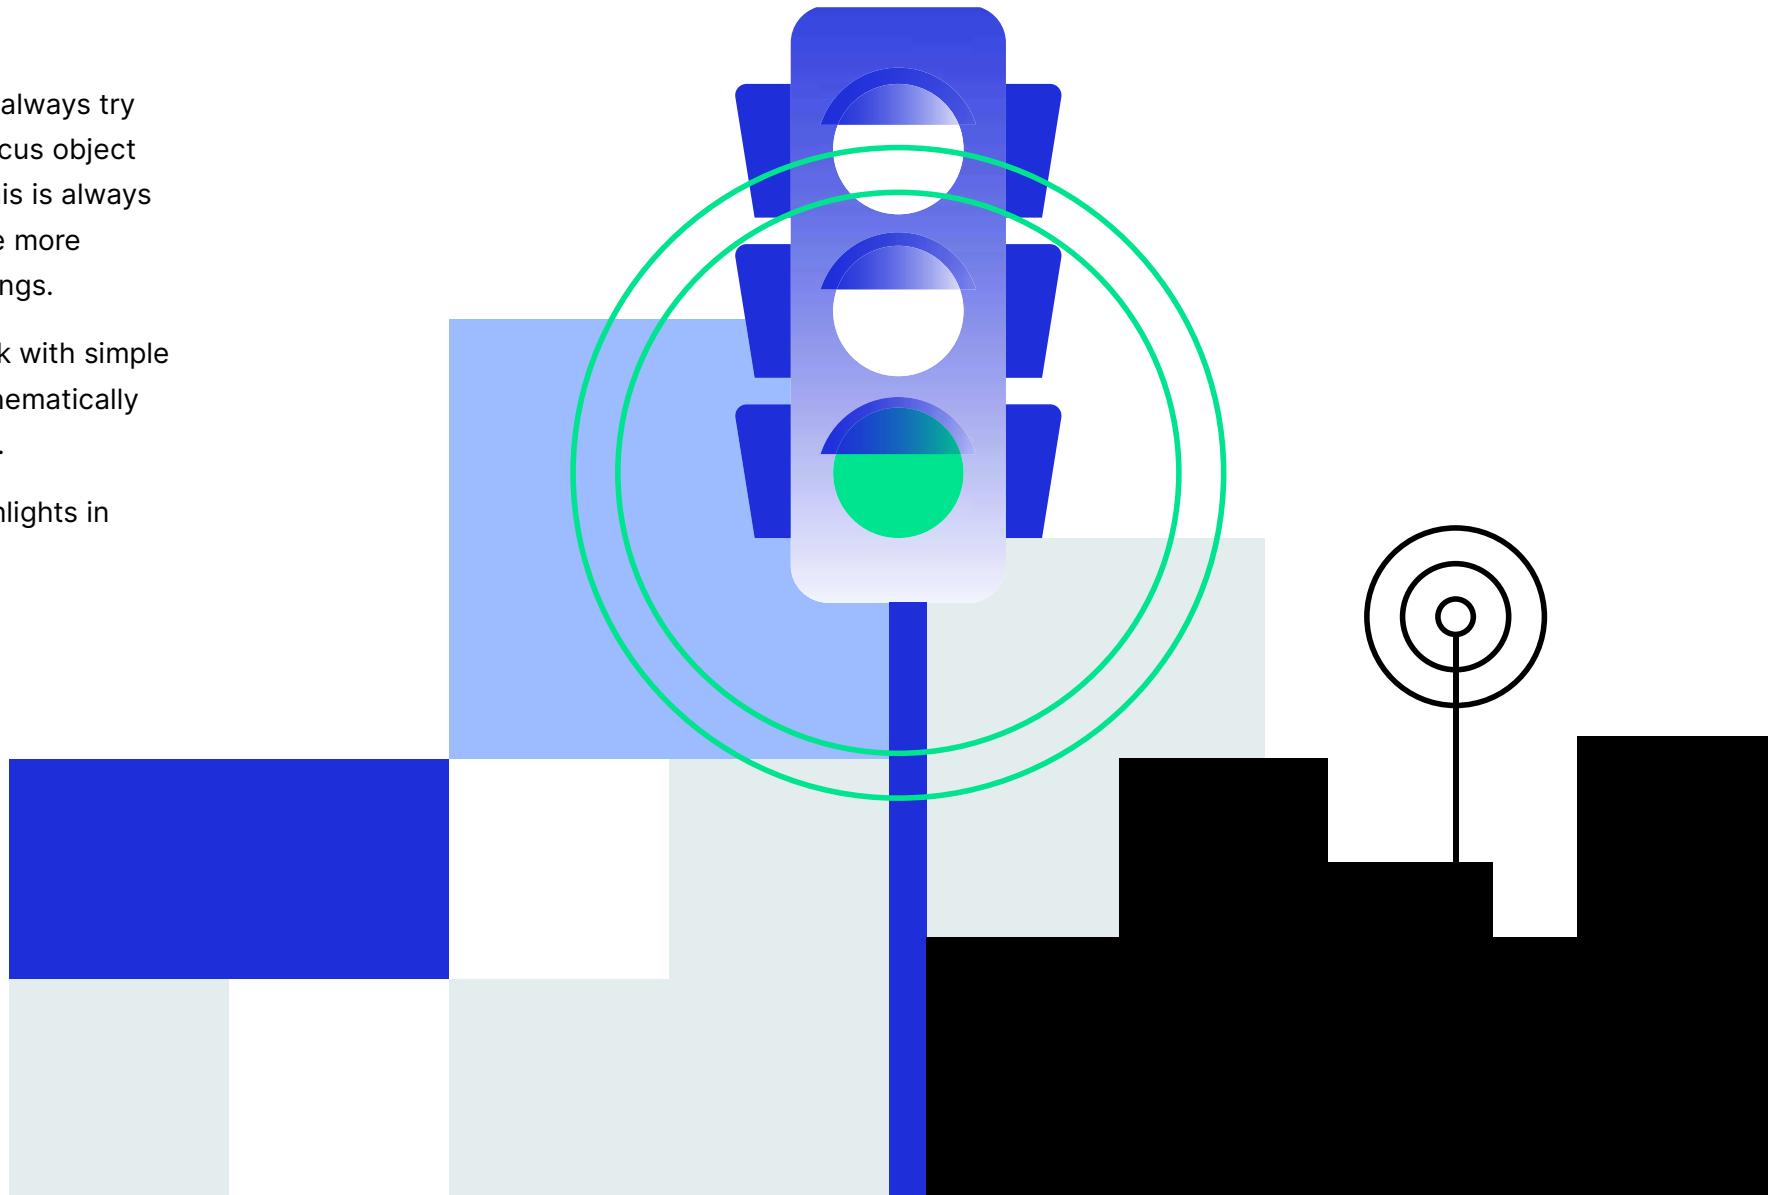

For medium size use, our illustration style gets a little more detailed, incorporating our icon-specific color gradient. But we still keep the complexity to a minimum.

VISUAL STORYTELLING: ILLUSTRATIONS

For larger illustrations, we always try to make a focus area or focus object the center of attention. This is always shown reduced, but a little more detailed than its surroundings.

In the background we work with simple geometric shapes that schematically remind of a city silhouette.

Gradients are used as highlights in specific places.
